

W-287: 24th Symposium on Astroparticle Physics in the Netherlands

The Committee of Astroparticle Physics in the Netherlands (CAN) has organized the 24th Symposium on Astroparticle Physics in the Netherlands on June 20th and 21st, 2019 at hotel Hoge Duin in Wijk an Zee. We had 52 registered participants following with great interest the scientific progress, which was reported at the symposium. The broad activities of Dutch groups in research on high-energy cosmic rays, neutrinos, gamma rays, dark matter, and gravitational waves have been reviewed.

We had two invited speakers, Carlos Frenk on Distinguishing between CDM and non-CDM models using (strong) gravitational lensing and Sara Issaoun on First Image of a Black Hole.
