

## **2nd Dutch Star Cluster Meeting**

The 3rd of February we organised the 2nd Dutch Star Cluster Meeting in Amsterdam during a full day. The organizers consisted of four PhD students with research connected to star clusters: Liliana Rivera Sandoval, Smriti Vats, Difeng Guo and Ylva Götberg. We had about 30 attendees from Leiden University, ESTEC, Nijmegen University and Amsterdam University. The attendees have different career stages; master students, PhD students, postdocs and permanent staff. During the day we scheduled 11 talks of each 10-15 minutes, which the attendees had to apply to give in advance. The talks were diverse, both including computational, observational and theoretical topics, related to star clusters. The atmosphere during the cluster meetings is meant to be relaxed and we encouraged questions, which lead to discussions during the meeting.
