

It is my pleasure to report on the Astrophysics Master's Career Day 2019, which was kindly subsidized by NOVA with a grant of €3000. The event, which took place at the Utrecht Jaarbeurs on Saturday 30 Nov, was attended by 35 students from all four NOVA institutes (the same number of attendees as for the 2018 event). The students heard personal stories from a variety of academic and non-academic speakers, who talked about their career paths in order to give the students an idea about the various career options available to them. The students participated actively by asking many questions and interacting with the speakers during the talks and the lunch/coffee breaks.
